

MINI CROSS-WOUND SPOOLS

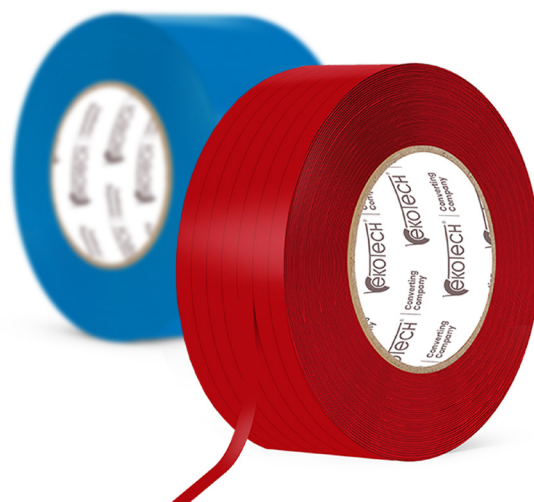

Smart, Stable & Compact Tape Reels for Narrow Widths

Mini Cross-Wound Spools

At **EKO-TECH Sp. z o.o. Sp.k.**, we are committed to delivering practical and innovative solutions that simplify our customers' operations. Our latest innovation—the **Mini Cross-Wound Spool**—is designed to provide the capacity of industrial spools in a compact and user-friendly format.

This product bridges the gap between standard discus reels and full-size cross-wound reels (typically on 152 mm cores), **eliminating the need for specialized rewinders**, strip guides, or large-scale consumption.

What is a mini cross-wound spool?

Built on a **76 mm (3") standard core**

Fixed **core width: 50 mm**

Offers **stable winding of long-length tape** even in narrow widths

Behaves like a **standard reel** in manual or semi-automatic applications

No special rewinding system required

It's the perfect choice when you need long tape lengths in small widths—without compromising on reel integrity or requiring investment in additional equipment.

MINI CROSS-WOUND SPOOLS

Smart, Stable & Compact Tape Reels for Narrow Widths

Key benefits

- **High Length, Compact Format** Wind hundreds of meters on a small, stable spool—ideal for high-efficiency tape handling.
- **No Special Equipment Needed** Fits standard 76 mm mandrels and unwinders. No strip guides required.
- **Stability in Narrow Widths** Prevents telescoping and collapse, even at high outer diameters.
- **Cost-Efficient & Space-Saving** Lower storage, shipping, and handling costs.
- **Customizable by Application** Widths, lengths, and tape types adapted to your needs.
- **For Manual or Automatic Use** Works in both hand and machine-based tape application processes

Suitable applications

- OEM production lines
- Manual or semi-automated tape dispensing
- Assembly, kitting & preproduction
- High-volume tape distributors
- Narrow-width tape users seeking greater reel stability
- Customers without specialized rewinders

Tape types available on mini spools

We manufacture mini-spools with 50 mm width cores (or narrower cuts), compatible with:

- Double-sided foam tapes (PE, PU, acrylic)
- Double-sided film tapes (PET, PP)
- Transfer tapes
- Single-sided tapes (masking, protection, surface mounting)
- Splicing tapes
- 3M™, tesa®, and EKO-TECH products
- Specialty tapes for bonding, sealing, isolating, and mounting

Technical format overview

Feature	Specification
Core Diameter	76 mm (3")
Core Width	50 mm (± customized if needed)
Tape Widths	From 5mm up to 25mm
Reel Outer Diameter	Depending on tape thickness
Tape Types Supported	Single- & double-sided, transfer, foam, film, paper
